Barracuda Content Shield

Protect your users and your organization with premium web content security.

Securing traffic to and from the web is critical—but not all web security solutions are designed for the era of cloud-connected services, remote workers, and widely distributed networks.

Barracuda Content Shield Plus is a cloud-based service that combines robust content filtering, granular policy enforcement and reporting, simple centralized management, and real-time threat intelligence to protect your users, your organization, and your brand. Its proxy-free architecture ensures minimal latency. Barracuda Content Shield delivers advanced web security with a more limited feature-set.

Robust content filtering

Content Shield provides advanced DNS filtering and URL filtering that's always up to date, and uses agent-based filtering to ensure remote users are fully protected even when they are off the network.

Real-time threat intelligence

The solution leverages Barracuda's unmatched real-time threat intelligence network, along with live heuristic analysis, to ensure that traffic is free of malware and other emerging threats.

### Centralized management and granular reporting

Content Shield gives you at-a-glance visibility into individual users' status and activities, and creates customized alerts of malicious threats. Highly flexible and customizable reporting options make it easy to document outcomes, identify high-risk individuals, and more.

Blanket policy enforcement

Content Shield Plus makes it simple to define global, local, group-based, time-based, and individual policies, and enforces those policies transparently across all users and devices, on- or off-network. Optimize your bandwidth by limiting access to non-work-related sites and services.
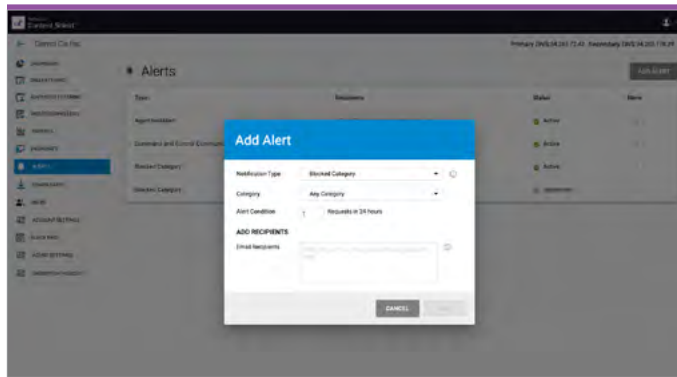

Feature Comparison

FEATURE	CONTENT SHIELD	CONTENT SHIELD PLUS
Easy setup	✓	✓
Protection from web-based threats	✓	✓
Web content filtering	✓	✓
SSL inspection		✓
Policy based on individual user		✓
Reporting based on individual user		✓
